

ERANDA JAYAWARDANA

Software Engineering Intern

✉ eraajayy625@gmail.com ☎ +94 77 215 4261 📍 Kegalle  LinkedIn  GitHub

Profile

Aspiring Software Engineer and final-year Computer Science undergraduate with hands-on experience in full-stack application development and software engineering principles. Skilled in designing, developing, testing, and maintaining secure, scalable, and user-focused applications while collaborating in Agile team environments and using version control systems. Passionate about solving real-world problems through clean, efficient code, continuously learning new technologies, and contributing to high-quality software solutions in a fast-paced development environment.

Education

Bachelor of Computer Science (Undergraduate), *University of Ruhuna* 2023 – Present
Matara, Sri Lanka

Technical Skills

Programming Languages — C, Java, JavaScript, Python

Frontend Technologies — React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend Technologies — Spring Boot, REST, JWT

Databases — MySQL, MongoDB

Tools & Platforms — Trello, GitHub, Docker, Figma

Other — Agile, Scrum, Technical Documentation

Volunteer Experience

Participant Engagement Team Leader - Rushcoder 3.0, *University of Ruhuna*
Computer Science Student's Society

Member - Computer Science Students Community *University of Ruhuna*

Project Experience

Personal Healthcare Monitoring System (Healthify)  *Group Project*

- Healthify is a web-based personal healthcare monitoring platform designed to securely manage medical records, track health data, and connect patients with doctors in a single system.
- Developed using React.js, Tailwind CSS, Java / Spring Boot, and MySQL to deliver a secure and responsive full-stack web application.
- Contributed to requirements gathering and analysis by identifying system needs and supporting the design of user workflows and functional requirements.
- Assisted in Agile project coordination through sprint planning, backlog refinement, and progress tracking using Trello.

Face Recognition System  *Individual Project*

- A smart attendance tracking system that automates attendance management using facial recognition technology.
- Developed using React.js, Tailwind CSS, Python Face API, and MongoDB.
- Implemented facial recognition features for accurate and automated attendance tracking.

- Designed responsive and user-friendly interfaces for efficient attendance management.

Smart Transport Management System - RouteLanka [🔗](#), *Individual Project*

- Developed a full-stack Transport Management System using React.js, Tailwind CSS, Java / Spring Boot, and MySQL.
- Built a centralized platform for private bus company owners to manage buses, bus bookings, financial records, maintenance activities, and employee wages.
- Implemented secure RESTful APIs and MySQL database integration to support efficient data management and business operations.
- Designed a responsive and user-friendly interface to streamline daily transport management processes.
